

Bamboo for Climate Change and Carbon Market Opportunities

Pablo van der Lugt

Li Jinliang

David Antonioli

Bamboo is one of the fastest growing plants in the world. This makes it particularly suitable as a tool for carbon sequestration. This session will provide knowledge of potential carbon emission reductions through afforestation, sustainable forest management, product development, and existing and potential carbon markets for bamboo carbon projects

Time: 19:30-21:00 (Beijing, GMT+8)
