June****INBAR WEBINAR THEME  
Bamboo and Environmental Management****Soil and Water Conservation with Bamboo****Dr. Rajesh Kaushal****Dr. Juan C. Camargo****Dr. Daniel S. Akoto****Language: English****Time: 19:30-21:00 (Beijing, GMT+8), June 30, 2020****Join via: <https://bit.ly/2N7w8AG>****Moderator: Yanxia Li and Trinh Thang Long**

Bamboo has extensive fibrous roots and a rhizome system that make it suitable for holding top soil and for stabilising slopes to prevent soil erosion. Rapid growth and regrowth of bamboo roots and rhizome systems can improve soil structure, enhance groundwater recharge and regulate water flow. This webinar session will share the results of recent research and discuss how bamboo contributes to soil and water conservation around the world.
